ENVIRONMENT

Overview

Vocabularies:

What are they and why we need them

NERC Vocabulary Server 2 (NVS2)

NVS2 in SeaDataNet:

Progress Report

Progress on SenseOcean Project

Vocabularies

Free text descriptions

Dataset1 includes Oxygen Concentration (mM) and Air saturation (percent) measurements.

Dataset2 includes cO_2 (mmol/L) and air saturation (%) measurements.

Queries?

List datasets measuring O2 in **mmol/L**

Find **datasets** that measure **percentage of air saturation**

Find **datasets** with observed property **Oxygen concentration**

Dataset2

No available datasets

No available datasets

Conflicts

- Data-level conflicts are caused by differences occurring in data domains due to multiple possible representations and interpretations of similar data
- Misspellings

Oxygen

O2

Oxgen

Controlled vocabularies

- In [information science](#) controlled vocabulary is a carefully selected list of [words](#) and [phrases](#), which are used to [tag](#) units of information (document or work) so that they may be more easily retrieved by a search
- They are important:
 - capture expertise in agreed, well-defined descriptions
 - enable population of a given field in a metadata model with standardised unambiguous terms
 - enable records to be interpreted by computers
 - promote consistency and interoperability

NVS2 Vocabulary Server

<http://vocab.nerc.ac.uk/collection/{XXX}/current/>

- Concept URIs
- Description based in Resource Description Framework (RDF) and (Simple Knowledge Organization System) SKOS

definition

- Vocabularies are Collections

<http://vocab.nerc.ac.uk/collection/{XXX}/current/{XXX001}>

- Each Collection consists of many concepts
- A concept is a term that belongs to a collection

preferred label

alternative label

<http://vocab.nerc.ac.uk/collection/P06/current/MMPL/>

Mappings

Interlink data with
a rich and fast-
growing network of
other data sources

-204 Vocabularies
-161.000 terms
-RESTful interface
-NVS2 Search to search for
vocabularies and into the
vocabularies.
-NVS2 Editor to edit user
vocabularies.

How can Controlled vocabularies help solve “wrong results”

1. Dataset1 includes **UPCT** measurements.

2. Dataset2 includes **DOXYOP01**, **MMPL**, and **OXYSZZ02** measurements.

<http://vocab.nerc.ac.uk/collection/P01/current/DOXYOP01/>:
DOXYOP01: Concentration of oxygen {O2} per unit volume of the water body [dissolved plus reactive particulate phase] by in-situ oxygen optode

<http://vocab.nerc.ac.uk/collection/P06/current/MMPL/>:
MMPL: Millimoles per litre

<http://vocab.nerc.ac.uk/collection/P06/current/UPCT/>:
 Percent

<http://vocab.nerc.ac.uk/collection/P01/current/OXYSZZ02/>:
 Saturation (second sensor) of oxygen {O2 CAS 7782-44-7} in the water body [dissolved plus reactive particulate phase].

How can you help to be interoperable

- Participate in communities to create agreements
- Share knowledge and success stories
- Participate/organize events/interoperability efforts like:
 - SWE Marine Profile (Simon Jirka)
 - Oceanology workshop (Dick Schaap)
 - ODIP (Ocean Data Interoperability Platform)

Map from <http://www.seadatanet.org/Overview/Partners>

NVS2.0 & EU SeaDataNet-2

The screenshot displays the 'Parameters' section of the NVS2.0 interface. At the top, there is a navigation bar with tabs: Identification, Where, When, What, How, Who, Where to find the data, Cruise/Station, Documentation, Quality, and Others. The 'What' tab is currently selected. Below the navigation bar, the 'Parameters' section is titled and contains a list of parameters on the left and a details view on the right.

Parameters List:

- RBHY - Molecular biology parameters
- MPMN - Moored instrument depth
- NTUP - New production in water bodies
- NTRA - Nitrate concentration parameters in the water column
- AMOX - Nitrification rate in the water column**
- NTRI - Nitrite concentration parameters in the water column
- NTSD - Nitrogen concentrations in sediment
- NTSP - Nitrogen concentrations in suspended particulate matter
- NTPW - Nutrient concentrations in sediment pore waters
- SAMO - Nutrient fluxes between the bed and the water column
- R410 - Ocean colour and earth-leaving visible waveband spectra
- OPBS - Optical backscatter
- CSDE - Organic sulphur compound dynamics in the water column
- OMBI - Organometallic species concentration parameters in water bodies
- OMPW - Organometallic species concentration parameters in sediment pore waters
- OMWC - Organometallic species concentration parameters in water column
- DMST - Organosulphur species concentration parameters in water column
- SICO - Other fluxes between the bed and the water column
- DCMX - Other halocarbon concentrations in water bodies
- HLDE - Other halocarbon dynamics in water bodies
- OMET - Other meteorological measurements

Details for AMOX:

- Name: Nitrification rate in the water column
- Code: P02

Search text

SeaDataNet NVS2 services

Existing

- SeaDataNet Vocabularies
- NVS2 Search
- SPARQL endpoint
- NVS2 editor

New

- Vocabulary builder (ex One Armed Bandit)
- NVS2 Search new functionality (Search directly in a specific vocabulary) 
- Working towards ICES Synchronization (Roy is working on extending the metadata of existing concepts, consistency check with WOD)
- The mapping between P07 and MMI ORR cf_standard names 
- SKOS overlay with OWL (under discussions)
- Add more predicates

SensorML Candidate vocabularies

SensorML specific vocabularies

- **W01** - SeaDataNet Sensor Web Enablement and SensorML type vocabulary
- **W02** - SeaDataNet Sensor Web Enablement and SensorML sub-type vocabulary
- **GS1** - Geo-Seas features of interest
- **GS2** - Geo-Seas observed property
- Feature of Interest
 - GS1, S26 - matrix (BODC governed)
- Observable Property
 - Fine granularity (usage metadata) - P01, P07 etc.
 - Coarse granularity (discovery metadata) - GS2
- Characteristics&MeasurementCapabilities(weight, height, width, Frequency, Latency, Precision etc)

If additional new vocabularies are required then need to ascertain the content governance authority. NVS2 can deliver the technical governance.

Ongoing developments as part of the SenseOcean project

NERC SCIENCE OF THE
ENVIRONMENT

SenseOCEAN

SenseOCEAN draws together world leading marine sensor developers to create a highly integrated multifunction and cost-effective in situ marine biogeochemical sensor system.

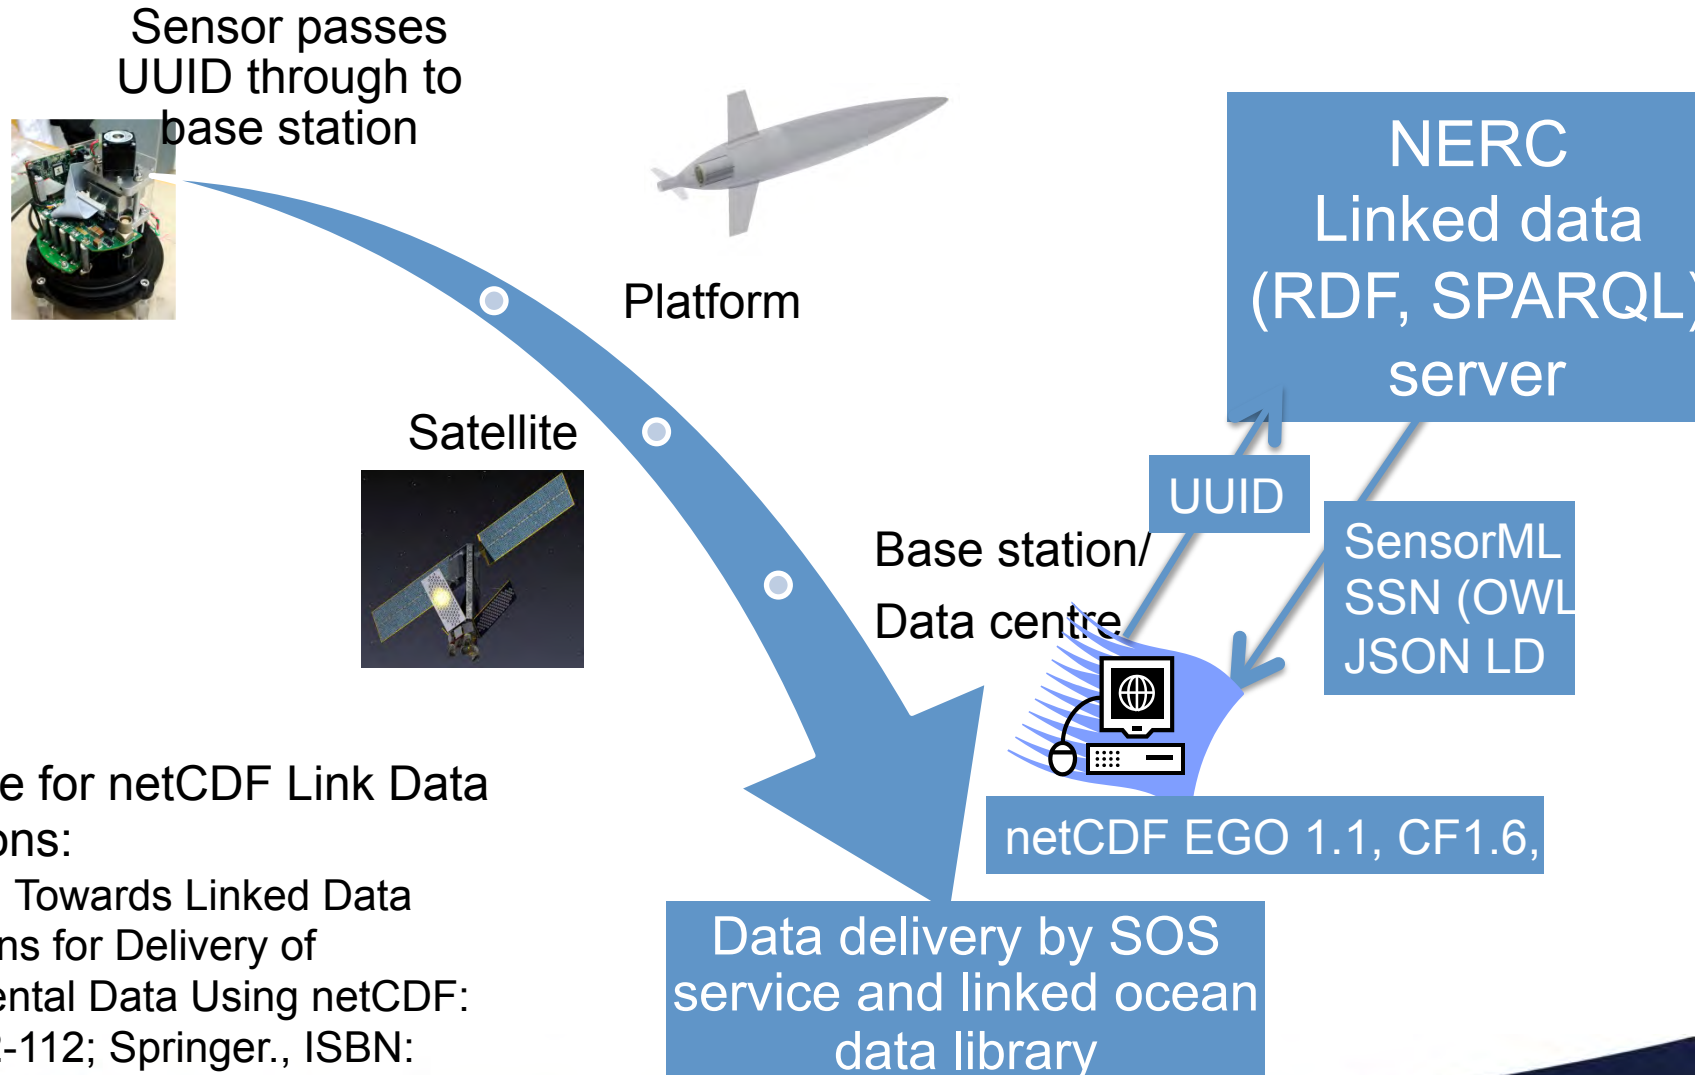

Ensure that

- Key metadata and technical data from novel sensors are never lost
- Efficient data processing
- Efficient data archival
- Seamless data delivery

Interoperability ... apply data standards from sensor through to delivery

Proposed approach

Aanderaa Oxygen Optode 4531

Oxygen:	O ₂ Concentration	Air Saturation
Operation Range:	0 - 800 μM ¹⁾	0 - 200%
Calibration Range:	0 - 500 μM ¹⁾	0 - 120%
Resolution:	<1 μM	0.4%
Accuracy:	<8 μM or 5% ²⁾	<5% ³⁾
	whichever is greater	
Response Time (63%):	<30 sec	
Temperature:		
Range:	-5 to +30°C (23 - 86°F)	
Resolution:	0.01°C (0.018°F)	
Accuracy:	±0.03°C (0.18°F) ⁴⁾	
Response Time (63%):	<2 sec	
Output format:	4531A: 0 - 5V, RS-232	
	4531B: 0 - 10V, RS-232	
	4531C: 4 - 20mA, RS-232	
	4531A: RS-232	
Output Parameters:		
RS-232:	O ₂ Concentration in μM, Air Saturation in %, Temperature in °C, Oxygen raw data and Temperature raw data	
Analog channel 1:	O ₂ Concentration in μM, or Air Saturation in %, Temperature in °C	
Analog channel 2:	Temperature in °C	
Sampling interval:	2 sec - 255 min	
Supply voltage:		
RS-232:	5 to 30Vdc	
Analog:	7 to 30Vdc, 12 to 30Vdc for 0-10V	

↑ -- Aanderaa 4531 oxygen optode --

URI	http://vocab.nerc.ac.uk/collection/L22/current/TOOL0969/
Identifier ()	SDN:L22::TOOL0969
Preferred label (en)	Aanderaa 4531 oxygen optode
Alternative label (en)	AA optode 4531
Definition (en)	A dissolved oxygen sensor which provides analogue and digital output to third party data loggers. Measurement is based on the ability of selected substances to act as dynamic fluorescence quenchers. The fluorescent indicator is a platinum porphyrin complex embedded in a gas permeable foil that is exposed to the surrounding water. A blue optical isolation coating protects the complex from sunlight and fluorescent particles in the water. This sensor is attached to a window providing optical access for the measuring system from inside a watertight titanium housing. The foil is excited by modulated blue light, and the phase of a returned red light is measured. By linearizing and temperature compensating, with an incorporated temperature sensor, the absolute O2 concentration can be determined.

ERDDAP > Sensor Instance Form

This is the Data Provider Form.
Need help? Send an email to the administrator of this ERDDAP ([thogaz at noa dot ac dot uk](mailto:thogaz@noa.dot.ac dot uk)).

Your Contact Information

This will be used by the ERDDAP administrator to contact you.
The information will be stored in the database to allow for identification of records
This won't be made public.

What is your name? null

What is your email address?

This dataset submission's timestamp is 2016-03-08T11:27:17.

Sensor instances Information

This form has been provided to allow you to enter the information require to turn a sensor protype into a sensor instance. This information will be added to the deployment database
If your require help please email the system admin at ([thogaz at noa dot ac dot uk](mailto:thogaz@noa dot ac dot uk)).

Sensor System Type?

Serial Number of the system:

**** No components were link to the system you have chosen ****

Things You Can Do With Your Graphs

Well, you can do anything you want with your graphs, of course. But some things you might not have considered are:

Conclusions

-Controlled vocabularies for

- Consistency
- Discoverability
- Machine & human readability

-Use of standards (RDF, SensorML, SPARQL) for sensors

-Participate in communities to create agreements

-Share knowledge and best practices

Thanks!
